

IN THE CLAIMS:

Claims 1-38 are cancelled, and the claims are presented as follows:

1-38. CANCELLED

39. (Original) An apparatus for delivering fluid to a desired location within a patient's body; comprising:

- an outer tubular body having an internal lumen therein, having proximal and distal ends and provided with a laterally extending portion adjacent its distal end;

- an inner tubular member slidably located within the outer tubular member, having proximal and distal ends and provided with a laterally extending portion adjacent its distal end; and

- a fluid delivery catheter slidably located in the inner tubular member, having proximal and distal ends and provided with laterally directed fluid delivery ports adjacent its distal end, the distal end of the fluid delivery catheter being locatable within the inner tubular member.

40. (Original) An apparatus for delivering fluid to a desired location within a patient's body; comprising:

- a tubular member, having proximal and distal ends and provided with a means adjacent its distal end for stabilizing the tubular member relative to body tissue through which the tubular member may extend;; and

- a fluid delivery catheter slidably located in the tubular member, having proximal and distal ends and provided with laterally directed fluid delivery ports adjacent its distal end, the distal end of the fluid delivery catheter being locatable within the tubular member.
